Course description: The course uses a dynamic, general equilibrium framework to study several key issues in the area of international macroeconomics. The topics include the determination of the current account and the real exchange rate, sovereign debt, theories of exchange rate determination, the operation and properties of alternative exchange rate regimes, financial markets and asset prices.

Evaluation: The grade will be determined by a final exam (90 minutes).

Suggested textbook: We will rely heavily on material from two texts: "Open Economy Macroeconomics," by Martin Uribe and Stephanie Schmitt-Grohe (U-SG); it can be downloaded for free from Martin's site the site, [http://www.columbia.edu/~mu2166/lecture\\_notes.html](http://www.columbia.edu/~mu2166/lecture_notes.html). The other text is by Obstfeld, M. and K. Rogoff, 1996, "Foundations of International Macroeconomics" (FIM), MIT Press. Copies of the book are available at the VWI library.

Useful reading: Obstfeld M. and K. Rogoff, The Six Major Puzzles in International Macroeconomics: Is There a Common Cause?, NBER wp 7777 (also at <http://escholarship.org/uc/item/0sx02651>)

Class notes and exercises: You can find the class notes (slides, exercises, etc.) on ILIAS and on <http://www.harrisdellas.net/teaching.html>. The schedule might change on short notice. Please check the latest version of the syllabus to make sure that a class takes place.
